

## **COMPLEX IMMUNO-GENE MEDICAL COMPOSITION FOR INHIBITING TUMOR CELLS**

### **ABSTRACT OF THE DISCLOSURE**

Disclosed is a complex immuno-gene medical composition activating NK cells to enhance host immune system. The composition is usage of a combination of a plurality of cytokines, combined usage of the kinds of Th1 and Th2 cytokines. Th2 cytokine antagonizes TGF- $\beta$  inhibiting NK cells to disable the inhibition of immune system, and Th1 cytokine activates NK cells in host to enhance the ability fighting against tumor cells. By means of the complex immuno-gene medical composition, removal of tumor cells is expectable.
